

Business Question and story Report

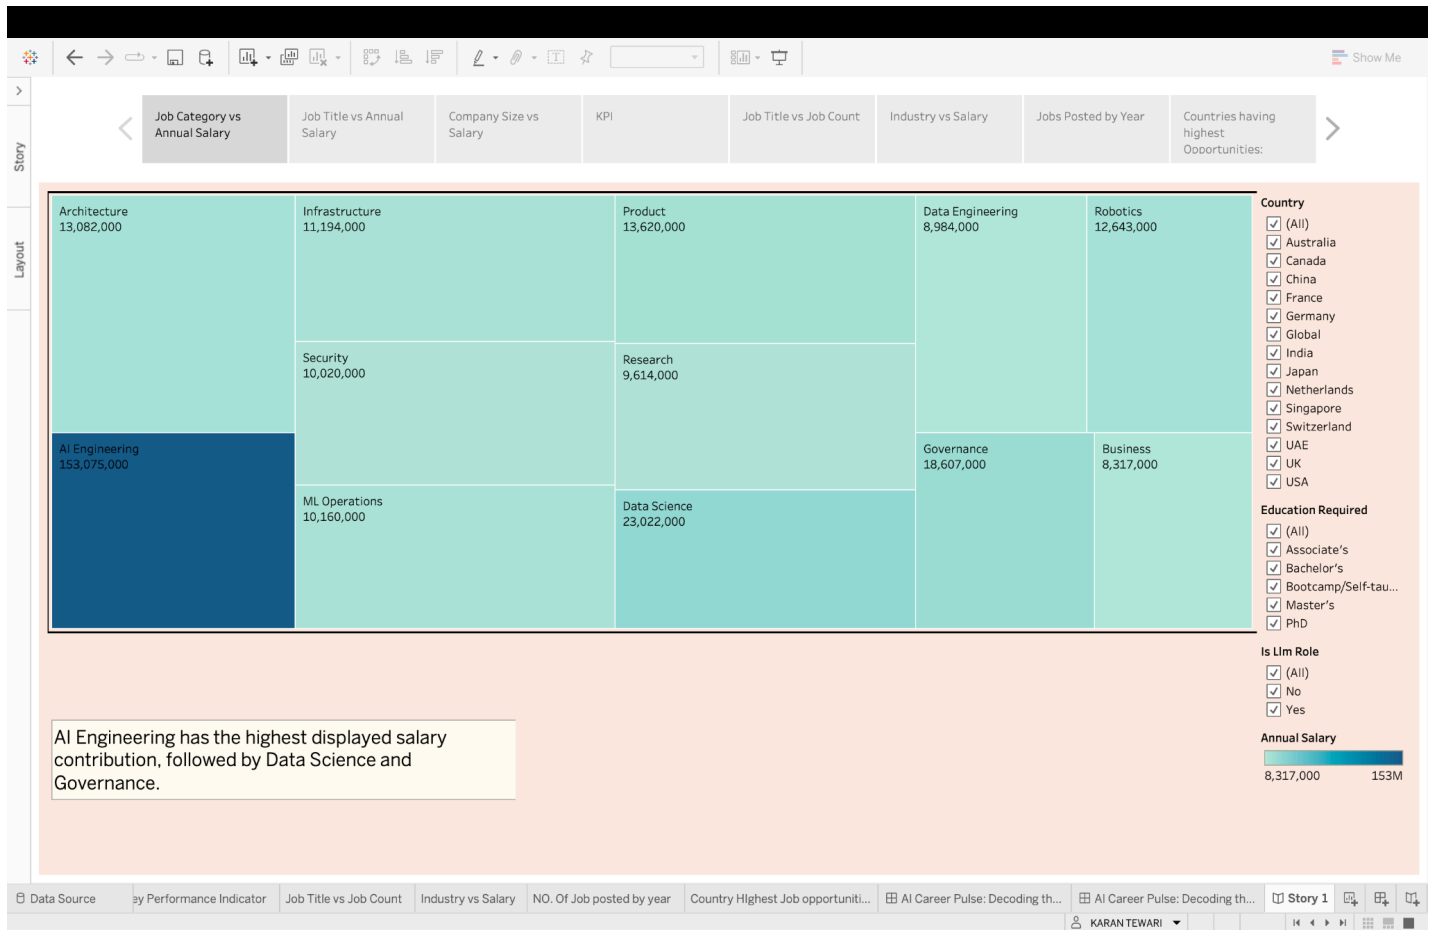

Date	18 August 2026
Project Name	AI Career Pulse: Decoding the Job Market

Introduction The AI job market keeps shifting, like job demand does, and also the salaries, industries, company sizes, job roles, and even the experience requirements. In this project we used Tableau to study those patterns, and then show them in a more clear and interactive way. The work is mainly aimed at pulling out salary patterns , common job roles, which industries look best, differences by company size, changes in job postings over time, and the geographic spread of AI opportunities

Visualisation Used in Tableau

No.	Business Question	Visualisation	Purpose	Insight
1	What is the average annual salary across different AI job categories?	Tree Map	Compare salary values across AI job categories.	AI Engineering has the biggest displayed salary contribution, right after it comes Data Science, and then Governance.
2	Which AI job titles offer the highest annual salaries?	Bar Chart	Compare annual salaries across AI job titles.	AI Solutions Architect, Senior ML Engineer, and LLM Engineer stand out with the highest displayed annual salaries, generally.
3	How does annual salary vary across different company sizes?	Horizontal Bar Chart	Compare salary values across company sizes.	Big Tech shows the highest displayed salary value, then it drops down to Enterprise, SME, and finally Startup companies.
4	What are the key indicators of the AI job market, such as total jobs, average salary, and average demand score?	KPI Cards	Present key summary indicators of the AI job market.	The dashboard shows an average annual salary around \$195K, and the average salary minimum is roughly \$135K.
5	Which AI job titles have the highest number of job postings?	Horizontal Bar Chart	Compare job-posting counts across AI job titles.	AI salary opportunities are spread across multiple industries, with several sectors showing strong representation in higher salary tiers.
6	Which industries offer the highest average salaries for AI-related jobs?	Segmented Bar Chart	Compare salary tiers across industries.	AI Job postings increased from 624 in 2025 to 876 in 2026, indicating growing hiring activity.
7	How has the number of AI job postings changed over time?	Year-based Bar Chart	Compare job-posting activity across years.	AI opportunities are concentrated across major global locations such as Sydney, Los Angeles, Singapore, and Dubai.
8	Which location offers the strongest AI opportunities?	World Map	Compare geographical AI job-market activity.	

Story: Decoding AI Job Market Opportunities

Story Conclusion Final Insight

The story ends by pulling together salary, demand, industry, company size, time and location, so you get this wider picture of where AI career chances tend to cluster. When you look from all those angles at once—like role prospects versus timing, and place versus org type it becomes clearer which jobs and sectors, plus what kind of organization sizes might actually show stronger outcomes. Also, the conclusions should be drawn only from the cleaned and validated dataset.
