

Business Question and Visualization Report

Date	13 August 2026
Project Name	AI Career Pulse: Decoding the Job Market

The AI job market is continuously changing, with differences in job demand, salaries, industries, company sizes, job roles, and experience requirements. This project uses Tableau to analyze these patterns and present them through clear and interactive visualizations. The visualizations are designed to help understand salary trends, popular job roles, industry opportunities, company-wise differences, and changes in job postings over time. These insights can support better understanding of the AI job market and help individuals make informed career decisions.

Visualisation Used in tableau

Business Question	Visualisation
Job Category vs Annual Salary	Tree Map
Job Title vs Annual Salary	Bar Chart
Company Size vs Salary	Horizontal Bar Chart
Key Performance Indicator	KPI Cart
Job Title vs Job count	Horizontal Bar Chart
Industry vs salary	Segment Bar Chart
No. of job posted by year	Year based Bar Chart
Country Having Highest job Opportunities	World Map

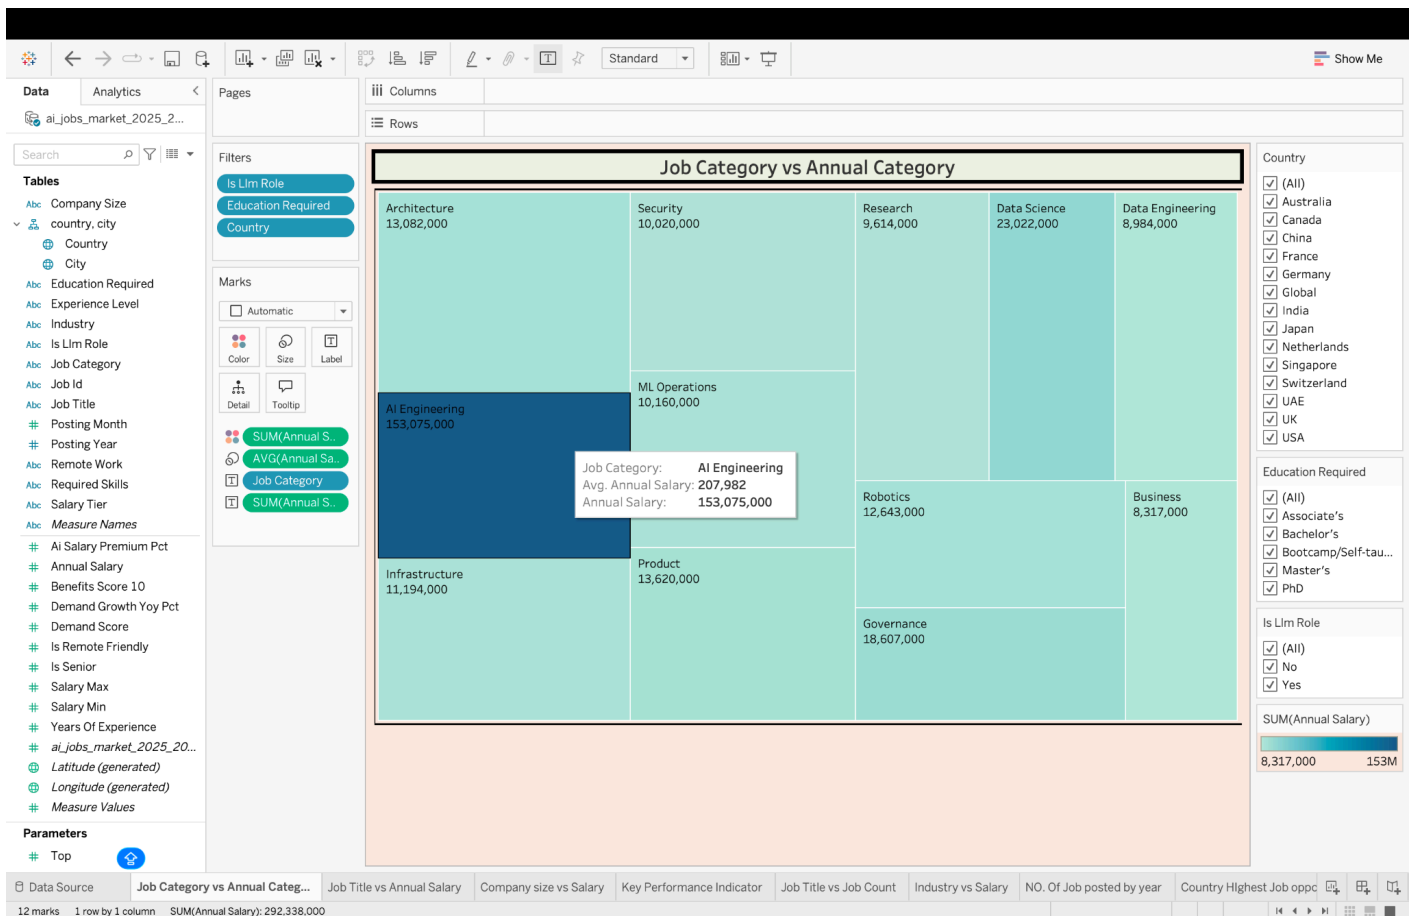

Business Questions and Visualisation

1.Job Category vs Annual Salary

→ *What is the average annual salary across different AI job categories?*

Visualisation: Tree Map

This visualization compares the total annual salary across different AI job categories. The size of each block represents the salary contribution of the category, allowing us to quickly identify categories with relatively higher salary values. It provides an overall view of how salary is distributed across different areas of the AI job market.

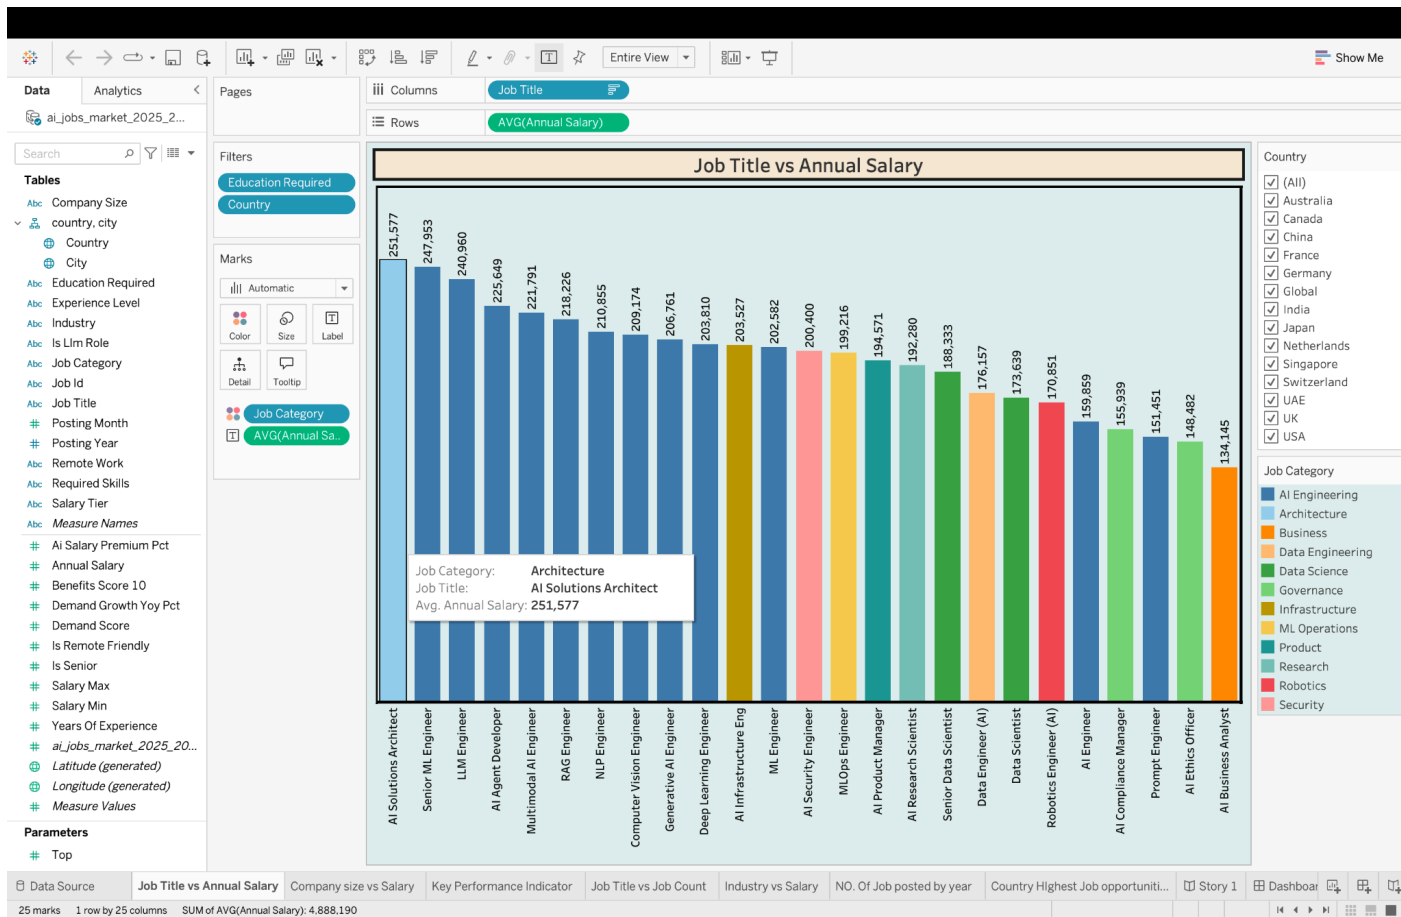

2.Job Title vs Annual Salary

→ Which AI job titles offer the highest annual salaries?

Visualisation: Bar Chart

This visualization compares the average annual salaries offered for different AI job titles. The bar heights make it easy to identify the job titles associated with higher salary levels. Roles such as AI Solutions Architect and other specialized AI positions can be compared to understand which career paths offer stronger salary potential.

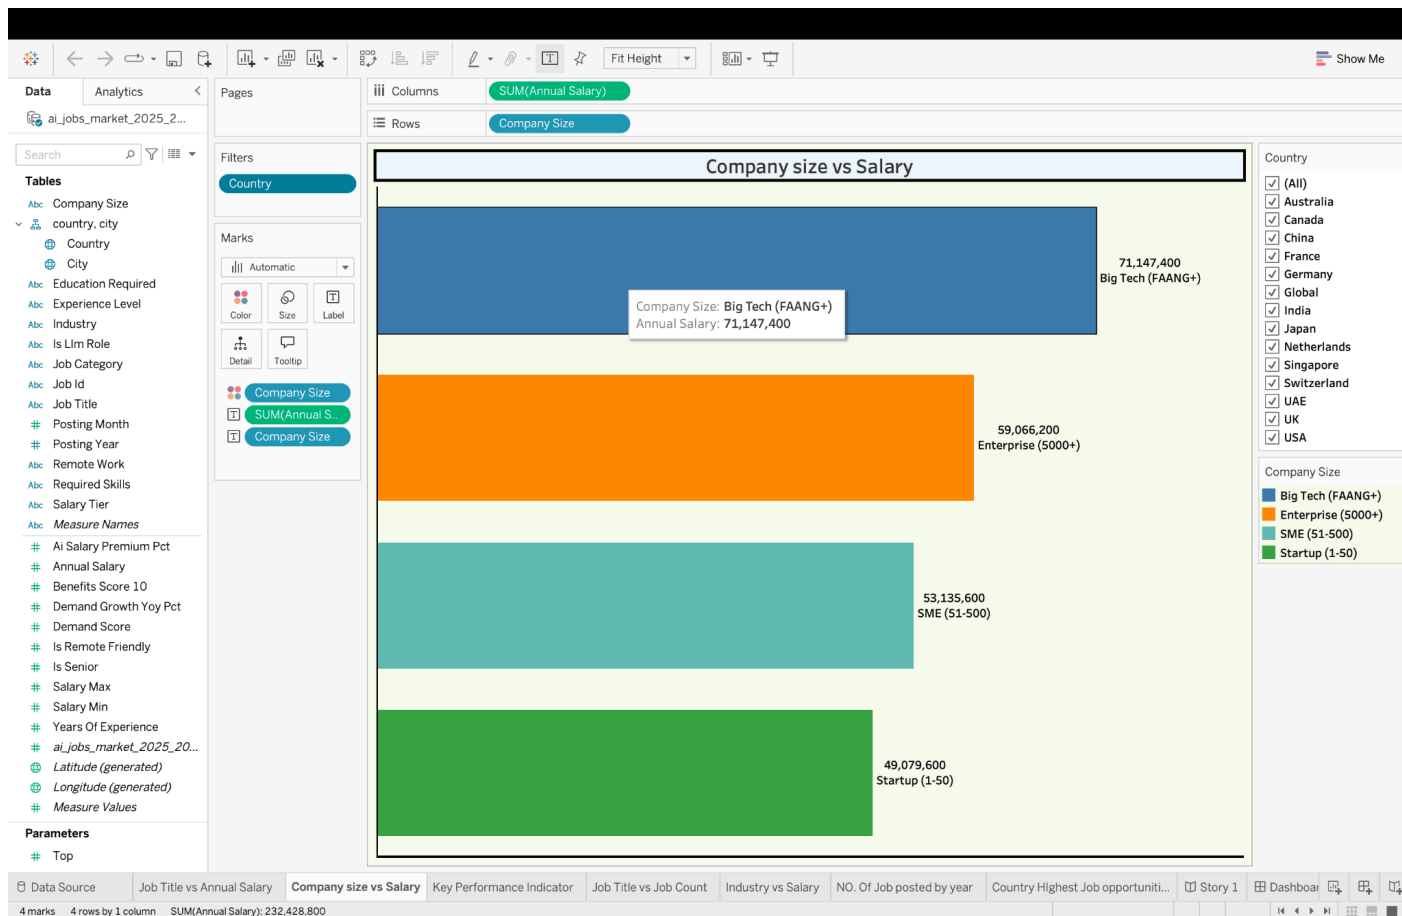

3. Company Size vs Salary

→ How does annual salary vary across different company sizes?

Visualisation: Horizontal bar chart

This visualization examines the relationship between company size and annual salary in the AI job market. It compares salary values across startups, SMEs, enterprises, and Big Tech companies. The visualization helps identify whether larger organizations generally provide greater salary opportunities than smaller companies.

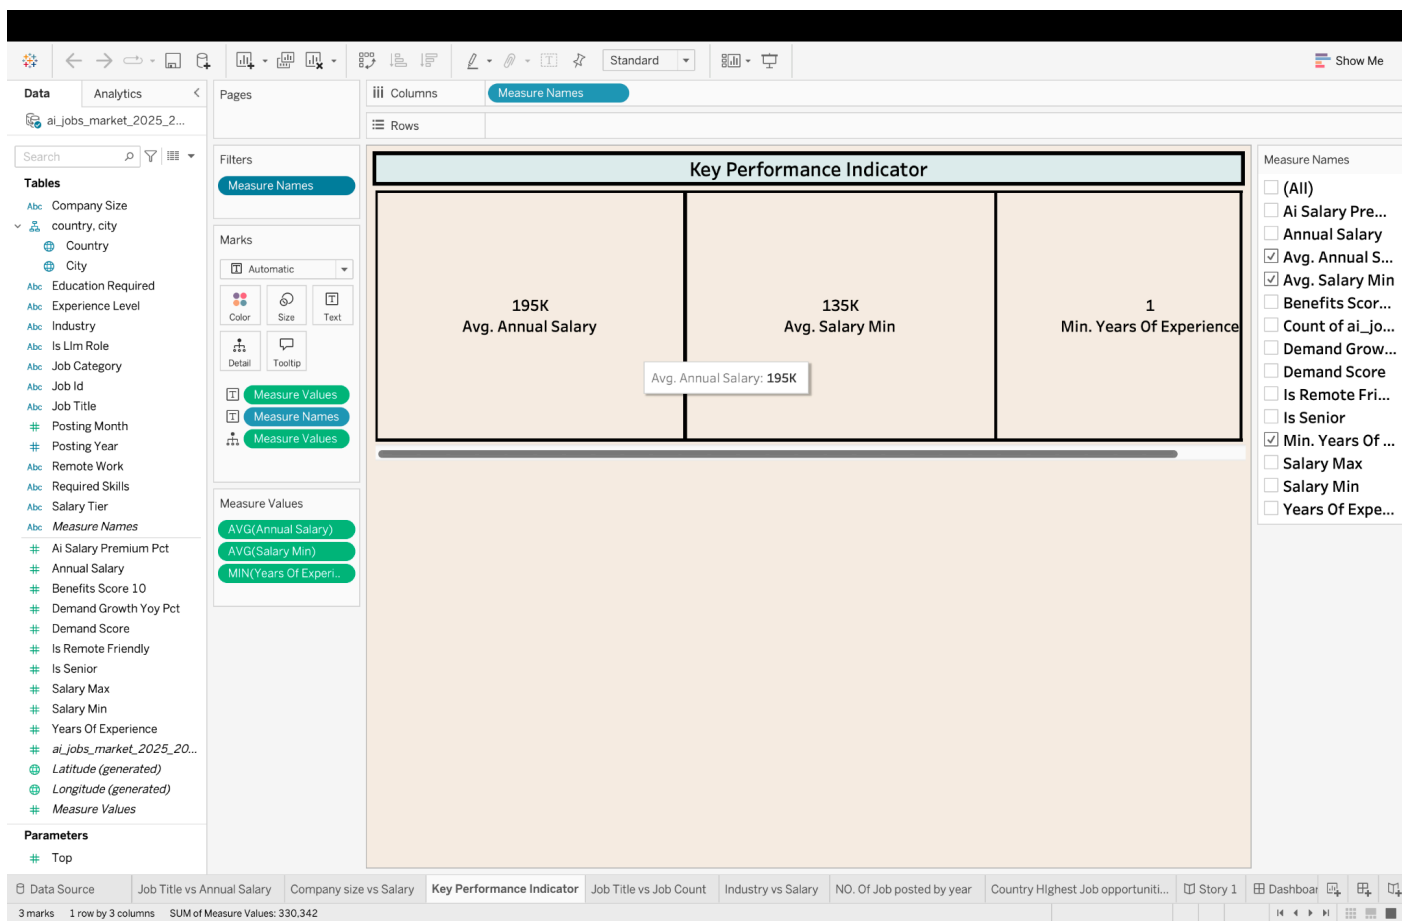

4. Key Performance Indicators (KPIs)

→ What are the key indicators of the AI job market, such as total jobs, average salary, and average demand score?

Visualisation: KPI cards

This visualization examines the relationship between company size and annual salary in the AI job market. It compares salary values across startups, SMEs, enterprises, and Big Tech companies. The visualization helps identify whether larger organizations generally provide greater salary opportunities than smaller companies.

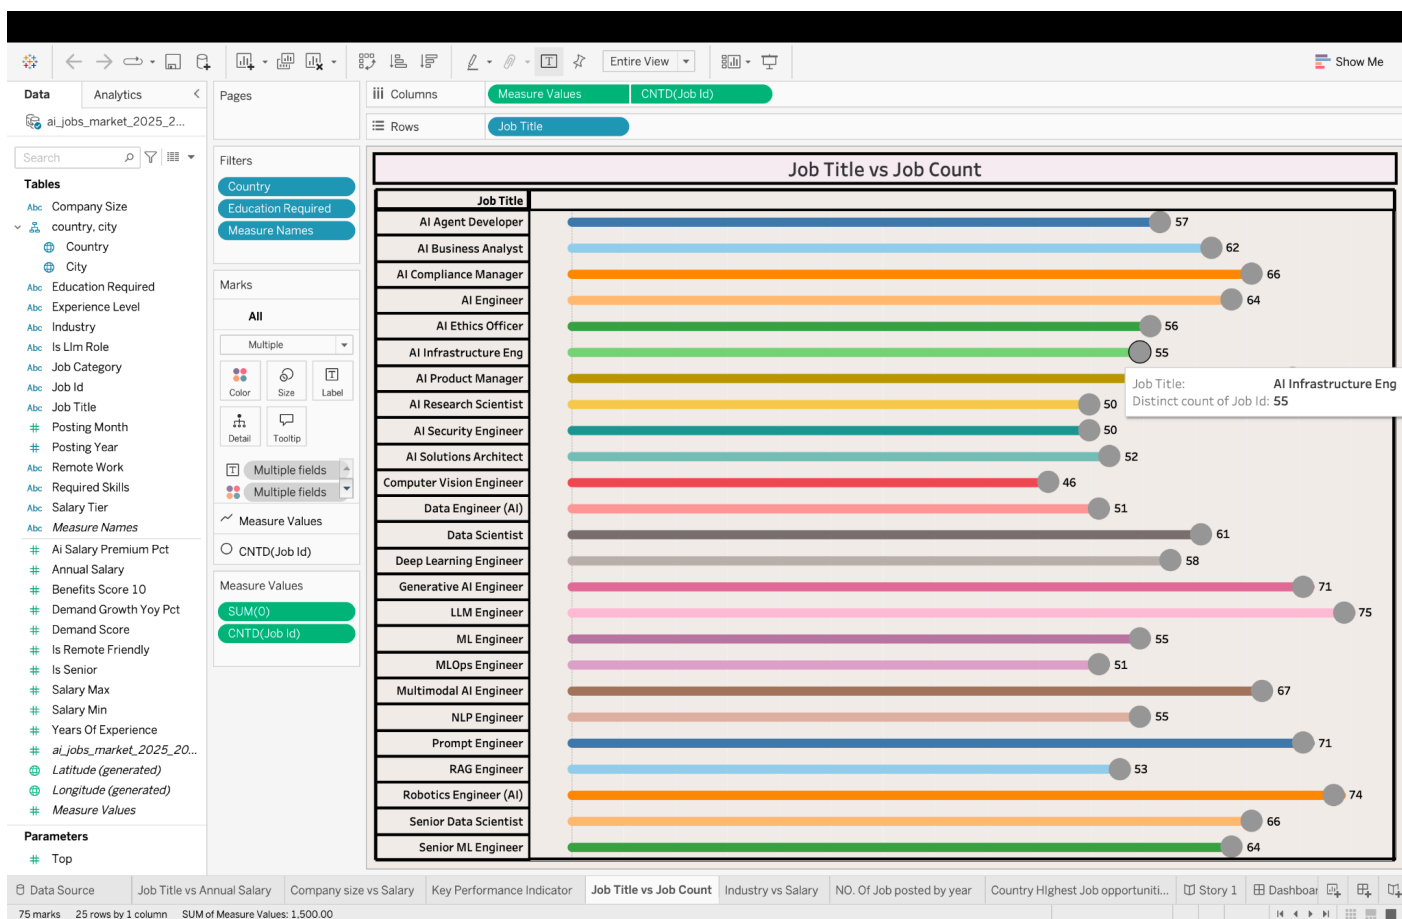

5.Job Title vs Job Count

→ Which AI job titles have the highest number of job postings?

Visualisation:Horizontal bar chart

This visualization shows the number of job postings associated with different AI job titles. It helps identify which roles have the greatest demand in terms of job postings. Roles such as Generative AI Engineer, Robotics Engineer, LLM Engineer, and other specialized AI positions can be compared to understand the distribution of employment opportunities.

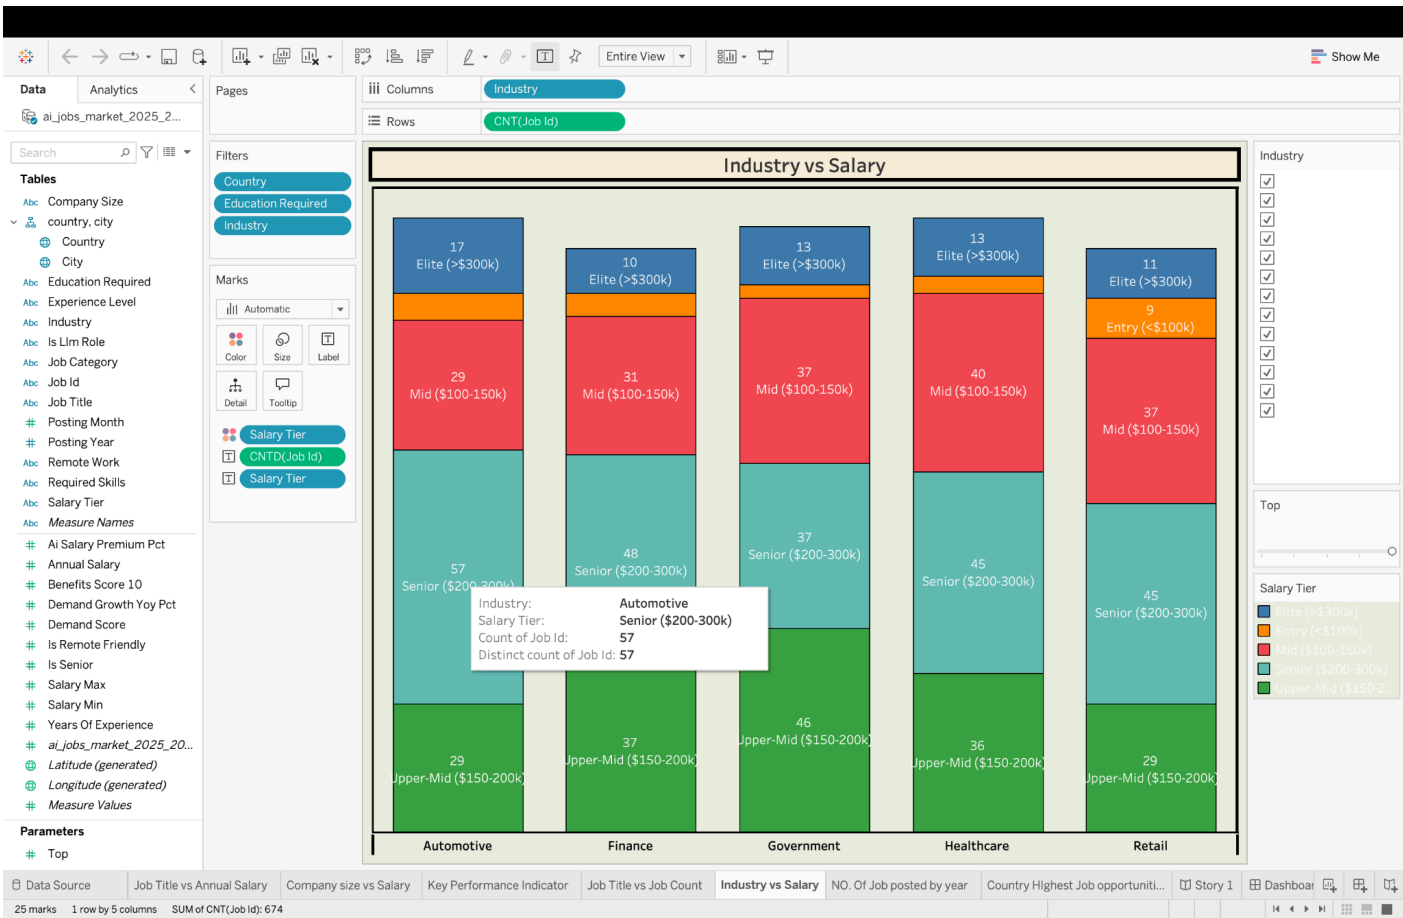

6.Industry vs Salary

→ Which industries offer the highest average salaries for AI-related jobs?

Visualisation:Segmented bar chart by salary tier

This visualization compares salary levels across different industries, including Automotive, Finance, Government, Healthcare, and Retail. The salary tiers show how jobs are distributed across different compensation ranges within each industry. This helps identify industries that provide stronger salary opportunities for AI professionals.

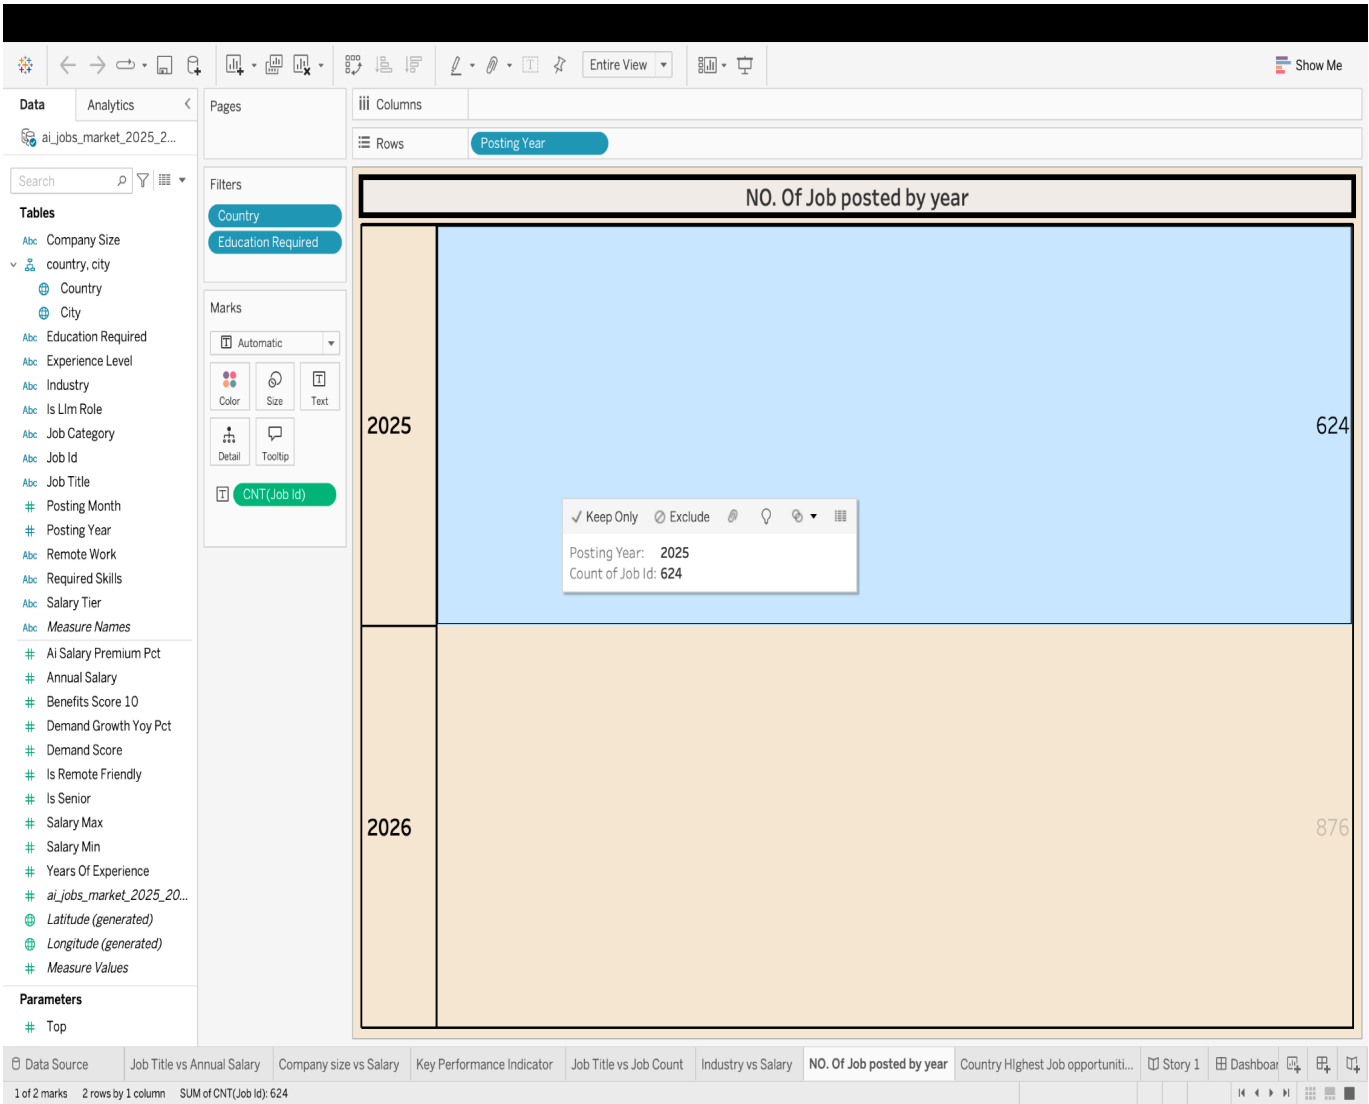

7. Number of Jobs Posted Over Time

→ How has the number of AI job postings changed over time?

Visualisation:Year-based chart.

This visualization examines the number of AI job postings across different years. It helps identify changes in job-posting activity over time and provides an indication of whether demand for AI-related positions is increasing or decreasing.

8.Country having highest job opportunities

→ Which location offers the strongest AI opportunities?

Visualisation:World map

This map visualizes AI-related opportunities across different locations. The size and position of the marks help users compare locations and identify areas with stronger AI job-market activity. It provides a geographical perspective of where AI career opportunities are concentrated.
